

# Agri-Alert Accessories

## Magnetic Reed Switch

May be used with all Agri-Alert models to detect any unauthorized entry or intrusion. Usually installed on doors and windows, the sensors monitor their opening and closing. Several magnetic reed switches may be wired in series.

## Digigard Quad Digital Motion Detector

Can be used with all Agri-Alert® models, and will cause a dial-out if people are detected entering an area. Range of detection covers approximately 40 x 40 ft. of area. Multiple sensors can be wired in series to a single input.

## “Water Bug” Water Sensor

Can be used with all Agri-Alert models to detect the presence of water on a horizontal surface. Multiple sensors can be wired in series to a single input. A film of water forming a bridge between these 2 contacts is all that is needed for an alarm condition. The sensor will not alarm due to condensation or high humidity.

**WB 200**  
**WB 1040 Sensor**

## Temp Alert

Can be used with all Agri-Alert models to monitor air temperature from -30° to 130° F (-34° to 54° C). Simply determine the acceptable temperature limits for your application by adjusting the temperature limit arms. When temperature exceeds the setting, the sensor triggers an alarm. Can be mounted to any wall or vertical surface. Multiple Temp° Alerts may be wired in parallel to a single input. **FGD-0022**

## Humidistat

Can be used with all Agri-Alert models to detect too high or too low a humidity level. Range of the humidistat is 10% to 60% RH. The sensor causes an alarm when the humidity exceeds or falls below the set limit. Multiple sensors may be wired to a single input.

## Smoke Detector with Built-In Relay

A photoelectric smoke alarm, operating on 120VAC via permanent connection. Has two sets of dry alarm contacts, one form A, SPST, and one form C, SPDT. Horn is included. The detector has tandem interconnect capability (maximum 20).

## Weatherproof Temperature Probe

Small probe, good general purpose devices for indoor/outdoor applications. Sensitive temperature element in a stainless steel housing with a moisture-resistant seal. 18” of wire included. Accurate to 0.1°F (0.1°C) with a sensing range of -40°F to 149°F ( -40°C to 65°C).

**AA Temp Sensor 18”**

## Electronic Siren

Electronic Indoor/Outdoor Siren, 30 Watt, 8 Ohms, 6-12 Volts DC. Dual Tone – Steady or Yelp. High impact ABS plastic.

## Expansion Card

Plugs into socket in Master Control Box (Max 2 cards)  
Gives 8 more zones of local expansion.  
Same surge and lightning protection qualities as 2400 Master Control

## Power Supply Kit

Includes ABS sceptor enclosure, a 7 A-h sealed lead-acid battery, and plug-in transformer.
